BIOCOLLECTION FIELDS VISIBLE IN BIOSPECIMEN CSV

A user with sufficient access can extract the biocollection Name in the biospecimen extract

A user with sufficient access can extract the field
Collection UID in the biospecimen extract

A user with sufficient access can search data for all custom fields entered against a subject.

A user with sufficient access can search data for all fields for a collection.

A user with sufficient access can search data for all custom fields entered against a collection.

A user with sufficient access can search data for all fields for a biospecimen.

A user with sufficient access can search data for all custom fields entered against a biospecimen.

A user with sufficient access can extract data for all fields for an inventory object (freezer, site, etc).

All custom fields can be searched in a manner similar to the existing functionality in Wager.
